

Dynamic Solutions offers VoIP

01/01/07

Dynamic Solutions is always looking for the latest and greatest technologies that offer practical benefits and immediate results for our SME customers. Internet Telephony, also known as VoIP happens to be one of those great technologies.

Voice over Internet Protocol is a set of protocols used to carry voice signals over the IP network (the Internet). This enables telephone calls to be made using a Broadband Internet connection instead of a regular (or analog) phone line. By making your calls over the Internet you can expect to see a significant savings on your phone bill (up to 55% off), lowering your daily cost of doing business.

Typical Call Rates with VoIP

- ▶ Australia wide calls starting at 10c untimed
- ▶ International calls from 3c per minute
- ▶ Free Inter office calls (worldwide)
- ▶ No connection fees and No contracts

To provide our customers with the most reliable and cost effective Internet Telephony solutions, Dynamic Solutions has partnered with Alloy. This new strategic, partnership allows us to deliver a cost efficient telephony solution to our customers, utilizing Alloy's VoIP hardware that was built specifically for the SME market.

In addition to your broadband connection, hardware plays a key role in determining the call quality and reliability of your VoIP connection. We have found Alloy's products to be far superior compared to other manufacturers and we are pleased to be able to offer our SME customers the savings of VoIP without any compromise to their business.

If you are interested in saving your business money, or want more information on VoIP, speak with a Dynamic Solutions representative today.
